

Transition to a Sustainable Kansas Food System

Feeding Kansas Communities Amid Climate Change & Peak Oil

David Yarrow

food & farm activist

The first service any community must provide is food every day,
and enough energy to cook that food.

Learn about **LIFE: Locally Integrated Food & Energy**
the foundation for every community economy

Feeding Kansas communities in the face of global warming
and the end of cheap energy will challenge us to change and adapt
It's time to go beyond organic and offer consumers choices
to buy *nutrient-dense, carbon-negative* food.

Food is also social organization and calls for a cooperative spirit.
The most important technology for our future is Community.

Industrial food supply needs huge amounts of energy
for fertilizers, fuel, tillage, transport, and pesticides,
and is not sustainable.

Who will grow food to feed 21st Century communities?
Where is the next generation of farmers?
